

ArchiveOS 최종 제출 상세본

작성일: 2026-07-09 14:59:23

1. 기본 정보

항목	값
저장소	C:\Users\dan18\Documents\ArchivePJT\ArchiveOS
브랜치	main
최종 커밋	9865528
Nexus	http://localhost:8080
Archive-Logistics	http://localhost:8092
Archive-Ledger	http://localhost:18080
ArchiveOS	http://localhost:5173

2. Read-only Smoke 결과

체크 항목	응답
Nexus /api/outbox/summary	200
Logistics /api/operations/summary	200
Logistics /api/routes/summary	500
Ledger /api/operations/summary	200
Ledger /api/reconciliation/summary	200
ArchiveOS /api/ecosystem/summary	200
ArchiveOS /api/ecosystem/topology	200

3. Write Smoke 결과

항목	결과
Nexus generate logistics(10)	200
Nexus publish logistics	attempted:6 published:0 skipped:6
Logistics outbox publish	SKIPPED (No publishable outbox events.)
Nexus generate ledger(10)	200
Nexus publish ledger	attempted:44 published:0 skipped:44
Nexus generate approval-risk(5)	200
Nexus publish approval-risk to ledger	attempted:44 published:0 skipped:44

4. 통과/차단 집계

항목	총계
read-only	19 (성공18/실패1)
-WriteSmoke	33 (성공32/차단1)

5. Topology

- archive-nexus -> archive-logistics : shipment event
- archive-logistics -> archive-ledger : logistics cost event
- archive-ledger -> archive-os : approval request
- archive-os -> archive-ledger : approval callback

6. 테스트/빌드

영역	명령	결과
Frontend	npm.cmd run test	pass
Frontend	npm.cmd run build	pass
Backend	npm.cmd run test	pass
Backend	npm.cmd run typecheck	pass
Backend	npm.cmd run build	pass
Java	gradlew.bat test	pass
Java	gradlew.bat bootJar	pass
Compose	docker compose config --quiet	pass

7. 남은 액션

- Logistics routes summary SQL 파라미터 타입 바인딩 수정
- allow-external-write=true 및 연동 enable 상태에서 실제 write 플로우 재검증
